PROFESSIONAL PROFILE

Hi there! I am a Games Technology BSc graduate (predicted 2:1 outcome). I have a passion for Technical 3D Art & Asset Creation, Level Design / Technical Level Design, and Particles & VFX. During the final year of my degree, I collaborated within a 10-person multidisciplinary team to design, create and successfully publish a commercial game title, Pantomime Horse Obstacle Course, on Steam.

My time at university has taught me a considerable amount about game development; from fundamental programming and asset creation to industry-standard design tools, version control and professional-level team communication skills. I am proficient in Unreal Engine and Unity game engines, as well as modelling tools: Maya / Blender / 3DS MAX and have used them extensively throughout my degree. I am incredibly dedicated to the games industry, and I am actively seeking games industry roles fitting my expertise (Asset creation, environments, design-centric roles) Thank you for taking the time to read my CV, please visit my portfolio page for more extensive details of my work.

RELEVANT EDUCATION

BSc (Hons) Games Technology: University of the West of England | UWE Bristol (2022-2026)

Graduating July 2026 (Predicted final grade 2:1)

Core Modules:

- **Comprehensive Creative Technologies Project**
 - Speculative exploration into predicting when players are lost in video games, then dynamically detect lostness and subtly guide the player through diegetic guidance.
- **Commercial Games Development**
 - Worked as part of a team to deliver a complete game product and publish to Steam.
 - Designed and created 3D assets and VFX systems alongside a team of likeminded professional-level students.
- **Advanced Technologies** (Unity Engine, C#)
 - Created an immersive webAR experience using Unity engine, hosted on itch.io.
 - Designed microgames with head and eye-gaze tracking as a core mechanic.
- **Game Engine Programming** (Unreal & Unity game engines)
- **Gameplay Programming** (Unreal Engine)
- **Principles of 3D Environments** (MAYA, Unity Engine, C#)

Core Skills:

- **Game Engine Competency:** Unreal Engine 5, Unity
- **3D Asset Creation Tools:** Maya, Blender, 3DS Max
- **Programming & Scripting:** C++, C#, Python, Blueprints (Visual Scripting)
- Good base knowledge of Niagara Systems, Landscape tools, PCG tools (Unreal Engine), UV mapping and texturing (Maya, Substance Painter)

GAME DEVELOPMENT EXPERIENCE

Horseplay Interactive (University Cooperative)

Project: *Pantomime Horse Obstacle Course* (PHOC)

- Contributed as part of a 10-person multidisciplinary team to concept, pitch, create and successfully publish a commercial game title using Unreal Engine 5.
- Designed, modeled and prepared player character and various 3D assets for use in-engine.
- Developed modular Niagara VFX systems, including a victory fireworks display using custom mesh shapes to spell out text elements in a blueprinted sequence.
- Assisted in designing and hosting a mock 'game booth' to showcase the game including set dress, awards and questionnaires.
- Applied player feedback to enhance user experience.

I found the process of launching this title extremely rewarding, and I believe it has taught me a lot about the games industry. This project was part of the UWE Games Technology module 'Commercial Games Development', comprising of ten final year students. The team and I are immensely proud of this project; we adhered to professional standards when considering communication within the team, involving weekly meetings in-person or via our dedicated MS Teams server, Jira for project management, which was strictly adhered to and used in version control software (GitHub). The team and I have also continued to work on the title post-assignment, and have now successfully launched on Steam.

Global Game Jam 2026 | Participant & Developer

I coordinated within a small team to rapidly prototype, program, and iterate a vertical slice of a game level for Global Game Jam 2026, with the prompt 'Mask'. The game we created was a hack-and-slash platformer called 'P41NT TH3 T0WN N30N', which is freely available on *Itch.io*.

I thoroughly enjoyed the experience of participating in GGJ and I am interested in participating again in the future. For this project, I was responsible for creating environment sprites such as platforms, walls and buildings. These were then also implemented in Unity to rapidly design a vertical slice level.
